MAXIMUM INTEGRATION INTO YOUR PROJECT

Mp GO 200x

It is the **"cabinet-free"** lift, with no controller cabinet, which is better integrated into your building project, with less construction interference, more aesthetic appeal, fewer electrical requirements, eco-efficient, digital native, connected, and cyber-secure.

It stands out for integration, comfort and eco-efficiency.

Capacity: 6 - 13 persons (450-1000 kg)
No. of stops: up to 15
Travel range: 30 m
Lift type: gearless, machine roomless, no cabinet
Speed:* 1.0 - 1.6 m/s
Traffic type: medium and high intensity
Voltage: Three-phase: 380 / 400 / 415 V
Optional three-phase: 220 / 360 / 440 V
Recommended uses: passengers, new buildings, covers the broad volume of the most common specifications

*Speed 1.6 m/s available up to 630 kg in the early versions.

A **LEVEL A** Energy efficiency and commitment to the environment.

Gearless Machine

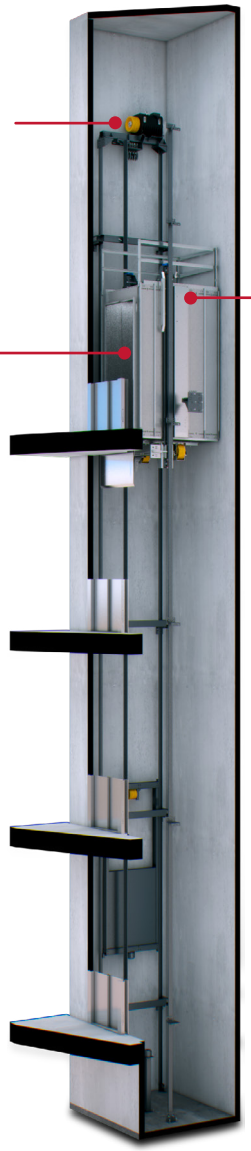

- High-performance, low consumption.

Mp Logix 40

Control system

- **"Cabinet free"** with no need for a large cabinet at the top floor. Integrated into the frame of the landing door itself.
- New generation of microprocessors for faster traffic management and cyber-secure remote connectivity.
- Cutting-edge frequency inverter with minimal electrical requirements and maximum electronic compatibility.

All these advantages make **Mp GO 200x** a more **competitive and reliable** solution throughout its entire life cycle.

New Mp CARevolution Cars

- Our cars are evolving: improved comfort, streamlined installation, and a new matrix display combining functionality and style.

Mp GO 200x

The smart evolution

An advanced, more eco-efficient, aesthetic and competitive lift.

A **LEVEL A** certification in energy classification according to VDI 4707 and ISO 25745-2*.

*Measurements taken on a 630 kg, 6-stop, 1 m/s lift with standard equipment for category 2.

MP CAR evolution

Cutting-edge technology without compromising on endless aesthetic possibilities

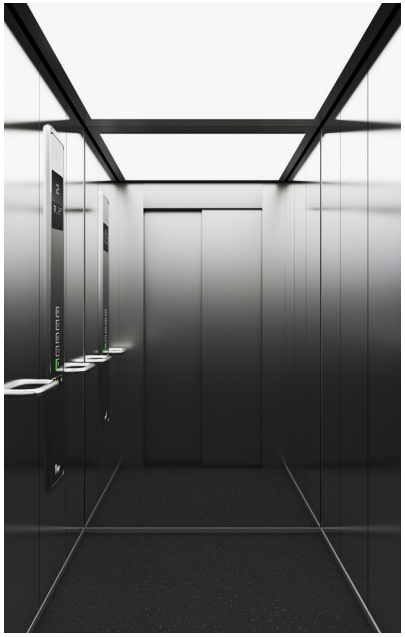

The car is the most important element in a lift for final users. That is why at **MP Lifts** we put forward a range that meet the most demanding needs.

Our wide portfolio is complemented by the possibility of designing the car that best suits your building, your requirements, or your personal tastes.

Now all you have to do is select the car series and design it. You can choose from **numerous finishes** and **combine** them any way you want.

New Viliter
Plastic-coated steel

New Supra
Stainless steel

New Style
Melamine | Laminated plywood

Full height column

Fusion color AC7

Optional 10" multimedia display

The lift on your smartphone

Vanguard technology at the lift's service.

MP IoL (Internet of Lifts) is MP's connectivity ecosystem which, supported by new technologies, launches a new generation of connected lifts offering new services and functionalities, aimed at improving the experience of users, owners and technicians.

Real-time safety

The lift's **faster connection** to service centres allows for automatic, real-time monitoring of the lift's status.

The lift on your smartphone

Mobile connectivity allows passengers to interact with the multimedia screen, call the lift from their mobile phone.

Predictive maintenance

The collection and analysis of lift data allows waiting times to be optimised, availability to be increased, predictive patterns of use and performance to be generated, and maintenance tasks to be **focused on preventing breakdowns** and **extending service life.**

Remote connection

Permanent communication from any device **improves the efficiency of maintenance operations.** It even eliminates unnecessary visits or allows faults to be reset remotely.

This enables to enjoy new features and advantages that increase the lift's efficiency, safety, and control. All of this, in **Mp Logix 40**, comes together with faster updates, remote management, and more advanced levels of cybersecurity.

We design smart elevation

solutions

to improve people's quality of life.
